## Problem

Let $x$ and $y$ be real values in the interval $[0,1)$, and let $a$ and $b$ be relatively prime positive integers. Show that there exist real values $z$ and $w$ such that

$$
\begin{aligned}
& a z-\lfloor a z\rfloor=x, \\
& b w-\lfloor b w\rfloor=y,
\end{aligned}
$$

and

$$
|z-w| \leq \frac{1}{2 a b}
$$
